Task 5 – Cybercrime Awareness

Name: A P C Srikanth Reddy
Registration Number: 25BAI10860
Course: Digital Literacy

📝 Report Writing – Cybercrime Awareness Reflection

Introduction

While working on this task, I got an opportunity to learn more about cybercrimes, especially UPI and online payment frauds, which are very common today. As a student who regularly uses digital payment apps, this topic felt very relevant and practical.

What Surprised Me the Most

One thing that really surprised me during this research was how simple these scams actually are. I initially believed that cybercrimes required advanced technical knowledge, but in reality, most frauds depend on human mistakes. Fraudsters mainly use tricks like creating panic, urgency, or trust to manipulate people.

It was also surprising to see how even educated people fall victim to such scams just because they act quickly without verifying information.

Understanding the Risk

This task made me realize that cybercrime is not only about hacking systems, but also about understanding human behaviour. A small mistake like clicking a wrong link or entering a UPI PIN at the wrong time can lead to serious financial loss. This shows how important awareness and careful thinking are while using digital platforms.

Personal Change in Habit

After learning about these risks, I have decided to change one important habit. I will be more careful while making online payments and will always double-check before approving any request. I will also avoid responding to unknown calls or messages related to banking or transactions.

Conclusion

Overall, this task helped me understand the importance of staying alert in the digital world. Cyber safety is not just about technology, but also about awareness and responsible behaviour. By following simple precautions, we can protect ourselves and others from online threats.
